[^0]The Fund was up $0.46 \%$ in March and $1.82 \%$ in Q1. The Fund underperformed the benchmark over the last year, 3 year period and 5 year period versus the benchmark.

In Q1 global equity markets, as measured by the MSCI All Country World Index (MXWD), were up 7.78\% in Q1 2024. Additionally, USD fixed income, as measured by the Bank of America/Merrill Lynch B310 U.S. Corporate \& Government 5-7 year AAA-A Rated Index, was down 0.63\% in Q1 2024. Both equity and fixed income markets are recovering as interest rates are expected to decrease in the later part of 2024.

We also expect fixed income to out perform equities in 2024, so maintaining some fixed income exposure remains prudent in our view.

Regarding U.S. interest rates, at the end of Q1 2024 the FED continues to hold the fed funds rate at $5.25 \%-5.5 \%$. This decision is the result of persistent inflation and a resilient US economy. Rates are now expected to remain at this level until September with a potential of 2 rate cuts at in 2024.

The chart below illustrates the changes in U.S. prices and inflation adjusted spending from 2021 to February 2024. In the first quarter we see that spending decreased sharply at the start of the year but has been increasing into February. As long as levels of spending remain high so will inflation and as a result so will interest rates.

We had a strong first quarter in 2024 with the Targeted income fund. We anticipate that his should only be the start of what's to come for the year which should benefit the Select Balanced Fund.
