**Balanced Strategy, Global Opportunities**

In Q4 2025, the fund returned 0.6%, bringing full-year performance to 2.5%. This compares to benchmark returns of 1.2% and 5.7% over the same periods.

The fund's balanced strategy provided exposure to both global equity markets and fixed income opportunities throughout the year. International equities delivered strong returns, outperforming US markets by 13%, the largest margin since 2009. Stock markets in Germany, the UK, and Japan surged to record levels, supported by fiscal stimulus in Germany, ECB monetary easing, and a weaker US dollar.

The Fund's 9% exposure to the Preferred Property Fund (PPF1) was a drag on performance. The Fund negotiated with PPF1 to convert the equity holding into a note paying 7% and maturing in four years. Also, the Fund will receive a conversion fee of 10% payable in 24 monthly installments. The effective date of the transaction was 1st July 2025. Between March and year-end we expect this transaction boost performance by 1.8%. In 2027 the Fund will receive the final six payments and along with the interest on the loan, we expect the Fund's performance to benefit by around 0.9%.

Fixed income markets posted strong returns as borrowing costs fell and investors moved into riskier bonds seeking higher yields. Emerging market debt led the way with a 13.5% return, benefiting from solid economic growth and a weaker dollar. Corporate bonds returned 10.3%, with currency moves adding 3.2 percentage points to returns for US investors holding unhedged international bonds. Government bonds showed mixed performance, though US Treasuries gained 6.3% as the Federal Reserve cut rates by 75 basis points in response to a softer job market.

Barbados enters 2026 on firmer economic footing, supported by 2.7% growth in 2025, record tourism arrivals, easing inflation at 0.7%, and unemployment at a multi-year low of 6.6%. Strong international reserves of \$3 billion and a primary fiscal surplus helped reduce the debt-to-GDP ratio to 94.6%, reinforcing macroeconomic stability as global market conditions evolve.
